v57 post-70-second anomaly: repeated failed goal search and trajectory timing lag

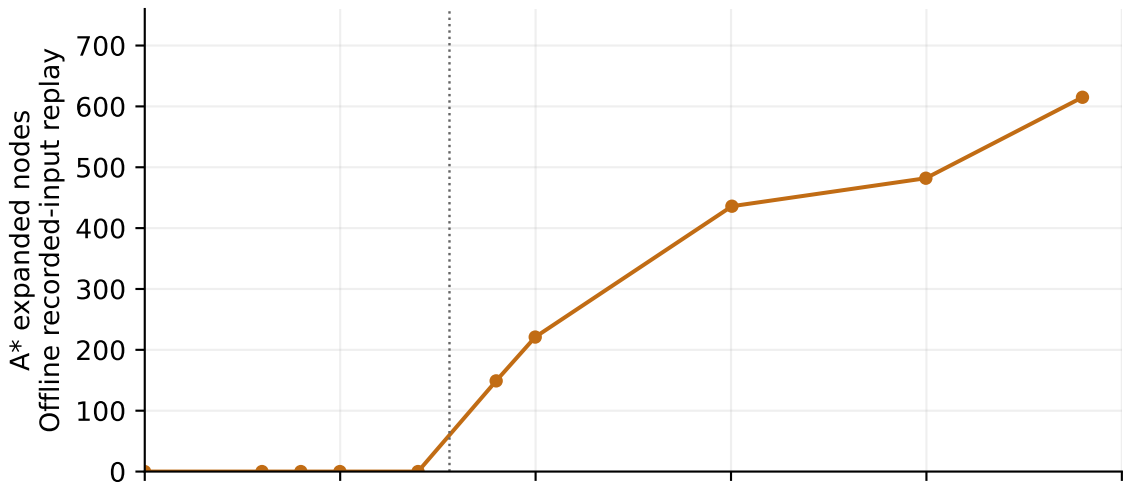

Trial 1: goal-search cost grows before warm initialization

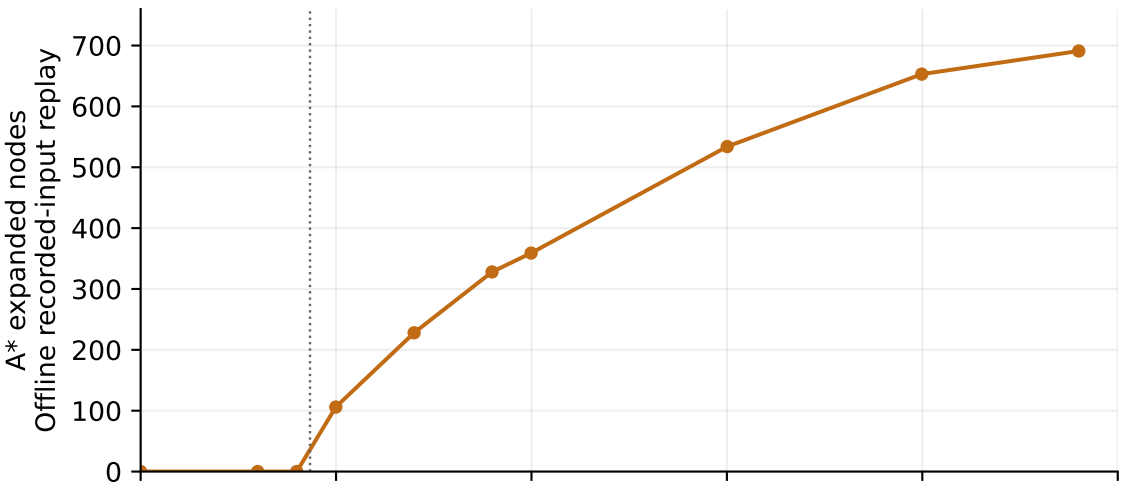

Trial 2: goal-search cost grows before warm initialization

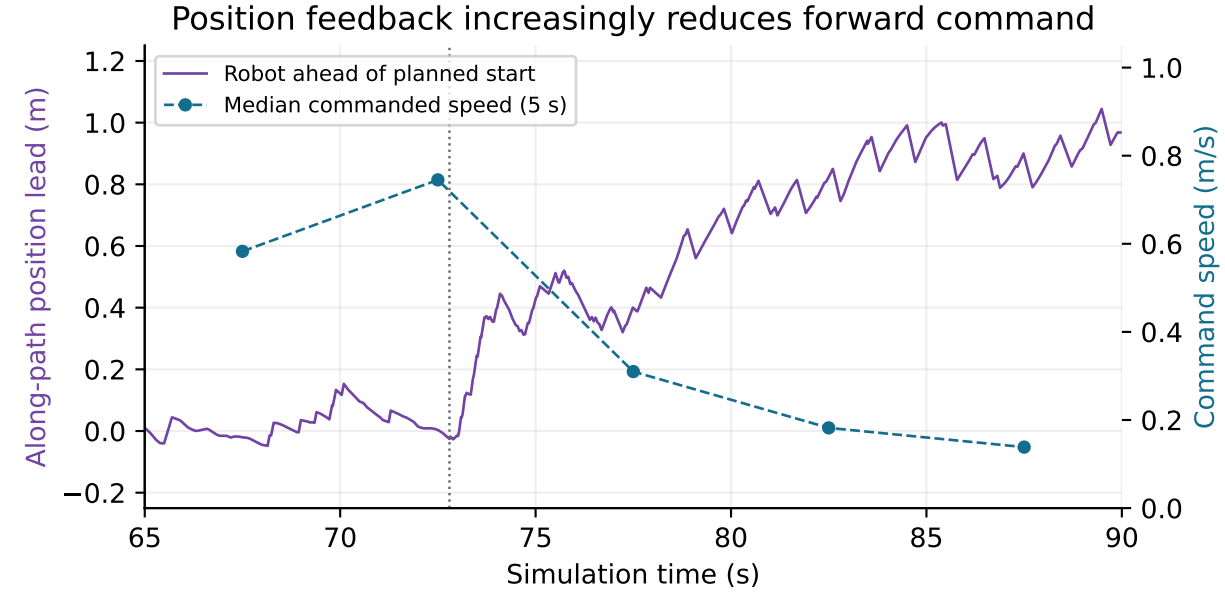

Every sampled goal search returns an empty path

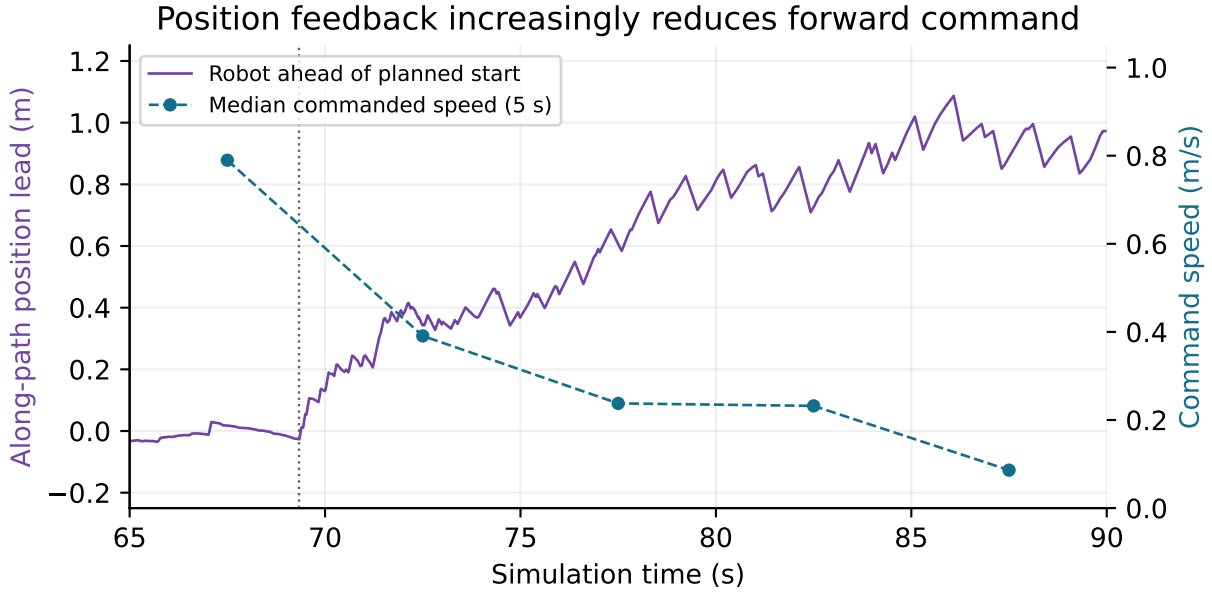

Every sampled goal search returns an empty path

Position feedback increasingly reduces forward command

Position feedback increasingly reduces forward command

Dotted line: start–goal pair fits A* pool. Upper panel: original live timings. Middle: unchanged-native offline replay, not new physics.
