v48 | Real-time local planning

gpu5070ti · v48_realtime_trial01 · Simulation time on both x-axes

Overall attempt rate 15.86 Hz | Median solve 3.09 ms | P99 207.18 ms | Peak 1,090 ms

Frequency: all 1,312 nominal starts; first partial window excluded. Simulation clock interpolated between start markers.
Latency: 1,311 completed rounds, including failures; full local-replan wall duration. Warm only = accepted warm seed without graph fallback.
