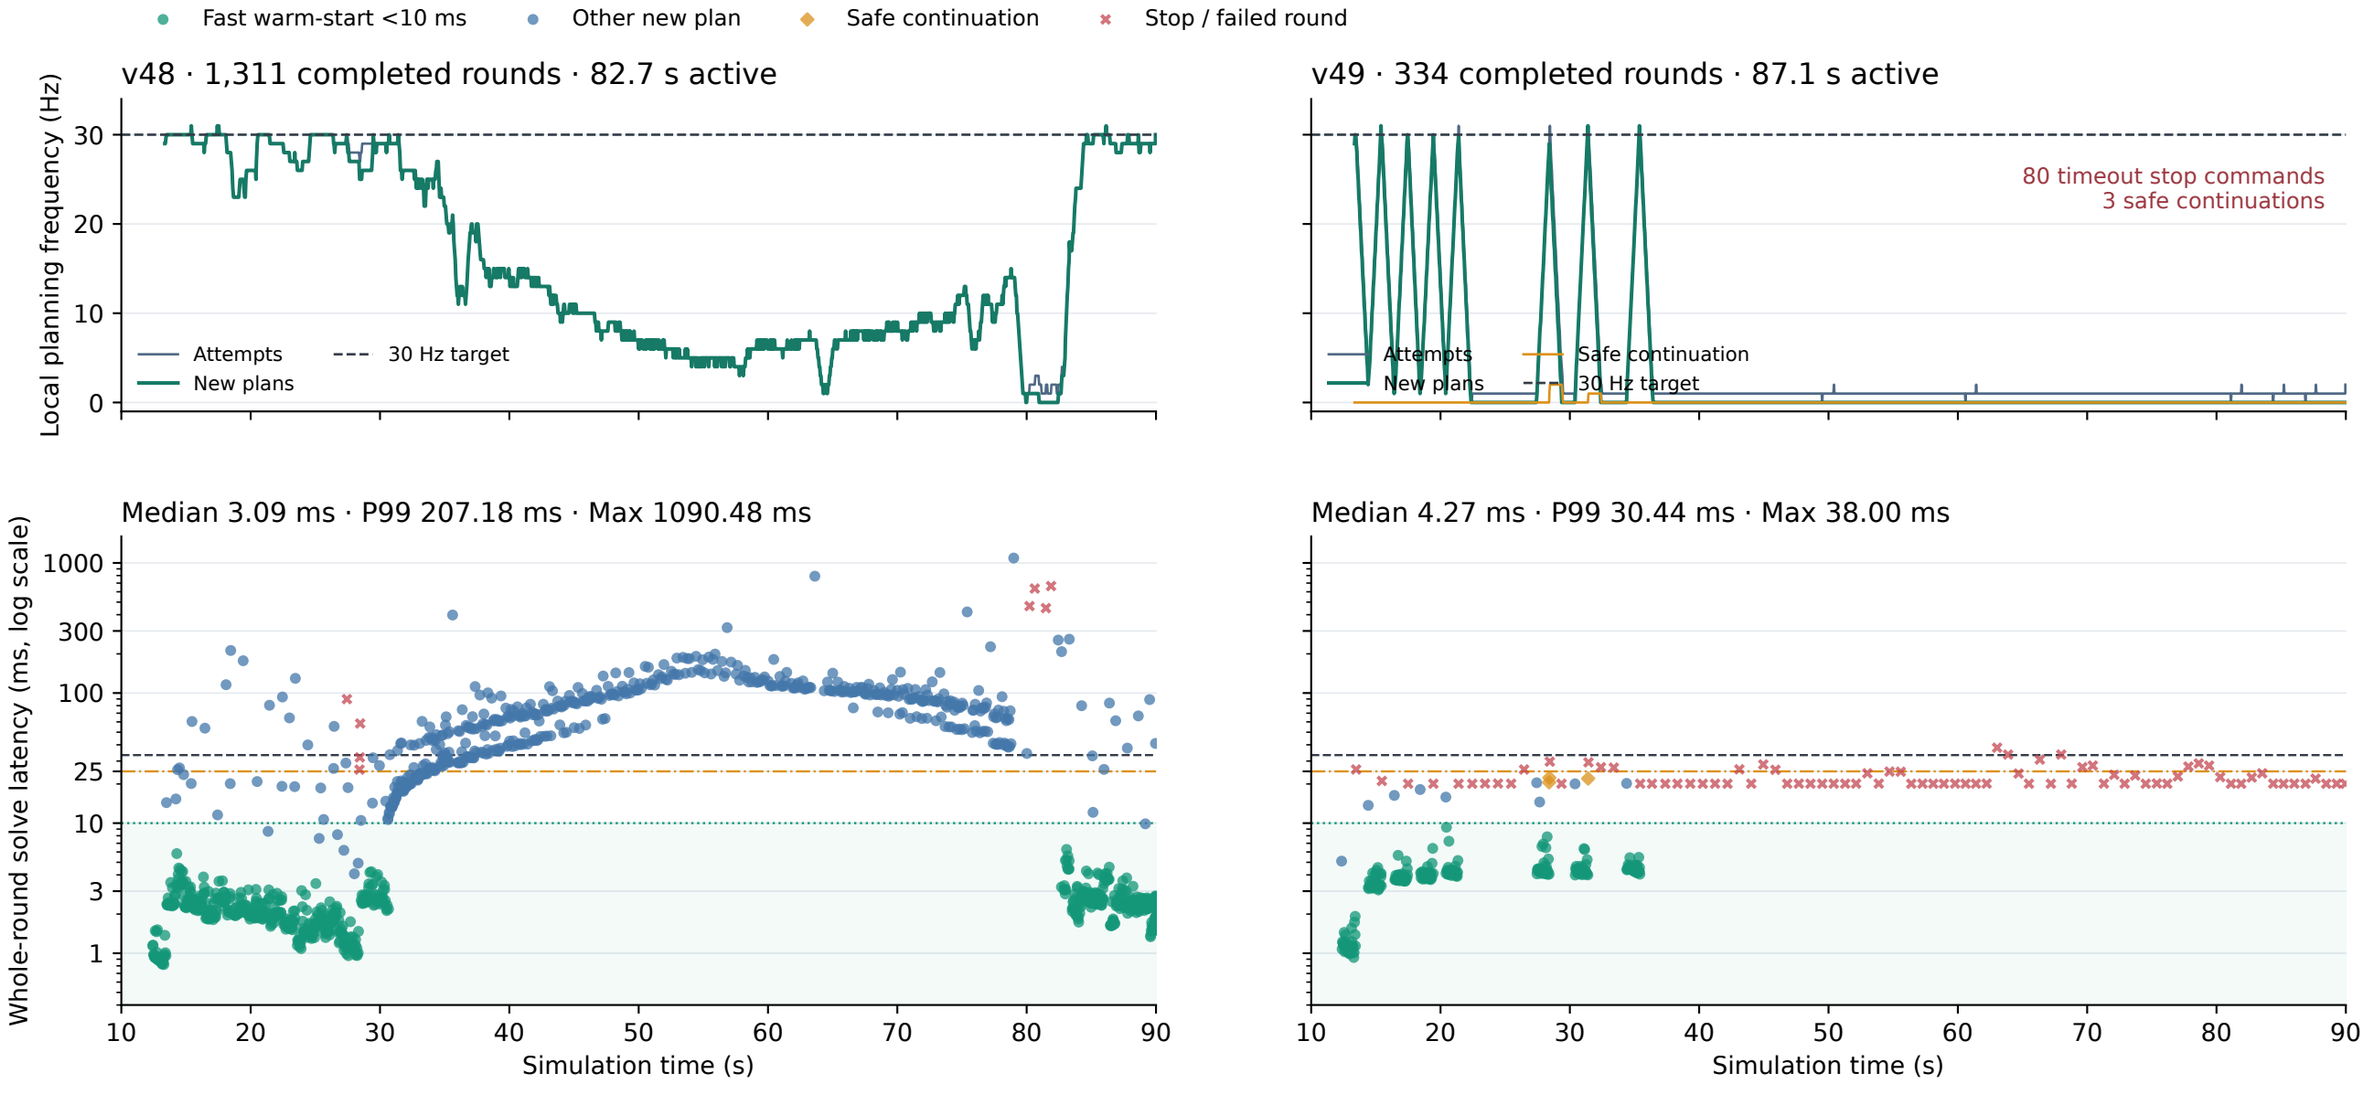
Local planning | v48 → v49 solve budget

gpu5070ti · Same Building profile · Rolling rates use wall time; x-axes use simulation time



Horizontal latency guides: 10 ms fast regime · 25 ms v49 total budget · 33.3 ms at 30 Hz.

Continuation reuses a freshly checked existing curve; it is counted separately from new planning. Stops do not count as planning success.

v49 failed acceptance: 3 rounds exceeded 33.3 ms, and the new timeout notice did not close the backend command gate.
